

HHI over age – reddit

The graph displays the age at first calving (in months) for various years from 2011 to 2017. The x-axis represents the age in months, ranging from 1 to 61. The y-axis represents the number of cows, ranging from 0 to 100. The data is presented as a series of lines, each representing a different year. The lines show that the age at first calving generally increases over time, with a significant peak around 33 months for the 2014 cohort. The 2011 cohort shows a relatively stable age at first calving, while the 2017 cohort shows a sharp increase in age at first calving after 45 months.
