

The graph displays the percentage of the population that has had sexual intercourse by a certain age, from Month 1 to Month 89. The lines represent different years from 2007 to 2015. The 2007 line is the lowest, starting at approximately 10% at Month 1 and rising to about 45% at Month 89. The 2015 line is the highest, starting at approximately 10% at Month 1 and rising to about 85% at Month 89. The lines for 2014 and 2015 show a sharp increase starting around Month 45, reaching over 80% by Month 89. The lines for 2013 and 2012 show a more gradual increase, reaching about 65% and 60% respectively at Month 89. The lines for 2011, 2010, and 2009 show a very gradual increase, reaching about 35%, 30%, and 25% respectively at Month 89. The lines for 2008 and 2007 show a very gradual increase, reaching about 20% and 15% respectively at Month 89.
