

The graph displays the decline of serum ferritin concentration (μg/L) over 61 months for seven subjects. The y-axis is logarithmic, ranging from 1 to 1000 μg/L. The x-axis shows age in months from 1 to 61. All subjects show a rapid decline in ferritin levels over time.

Subject	Year	Initial Ferritin (μg/L)	Final Ferritin (μg/L)	Final Age (months)
2014	2014	~1000	~1	~33
2015	2015	~1000	~1	~23
2012	2012	~1000	~1	~45
2016	2016	~1000	~1	~13
2017	2017	~1000	~1	~45
2013	2013	~1000	~1	~45
2011	2011	~1000	~1	~61
