

The graph displays the age at first sexual intercourse (in months) for females born in different years from 2007 to 2015. The x-axis represents age in months (from Month 1 to Month 89), and the y-axis represents the age at first sexual intercourse in months. The graph shows that the age at first sexual intercourse generally increases with the year of birth, with the 2015 cohort having the highest age at first sexual intercourse and the 2007 cohort having the lowest.
