

Active species over age – reddit

The graph displays the percentage of children with diarrhoea across different ages (Month 1 to Month 61) for the years 2011 through 2017. The y-axis represents the percentage, ranging from 0 to 100. The x-axis represents age in months. The data shows a general downward trend in diarrhoea prevalence as age increases, with a notable peak around Month 13 for most years. The 2012 data shows the highest prevalence, peaking near 100% around Month 13, while the 2017 data shows the lowest prevalence, generally below 20%.
